Some Notes

:)

Updated on 2025-09-23

1   Anomaly Detection

Definitino of 峰度 (Kurtosis) & 偏度 (skewness):

- $K < 0$: means the shape is flatter than the normal distribution.

- $K > 0$ means the shape is thinner compared to the normal distribution.

- $K = 0$: close to normal distribution.

- $S > 0$: longer trail on right. Max on left compared to normal distribution.

- $S < 0$: longer trail on left. Max on right compared to normal distribution.

- $S = 0$: close to normal distribution
